PROFESSIONAL SUMMARY

Risk and analytics professional with 17 months of experience turning operational data into reliable reports, resolving discrepancies, and supporting faster decisions in manufacturing. Recently completed an M.S. in Business Analytics and Artificial Intelligence with hands-on SQL, Python, Power BI, machine learning, fraud detection, and API-based data pipelines. Translates operational trends and model results into documented recommendations and is ready to apply this foundation to fraud, portfolio monitoring, and consumer lending.

TECHNICAL SKILLS

Programming & Analysis: SQL, Python, Pandas, NumPy, scikit-learn, Excel, PivotTables, data wrangling

Risk Analytics: portfolio monitoring, anomaly detection, root-cause analysis, fraud detection, risk segmentation, trend and variance analysis

Modeling & Statistics: machine learning, Random Forest, classification, feature analysis, precision, recall, F1, ROC-AUC

BI & Data: Power BI, Tableau, MySQL, SQL Server, Oracle, MongoDB, ETL, KPI dashboards

Technical Delivery: data validation, reconciliation, process documentation, REST APIs, Elasticsearch, GCP, Git/GitHub

PROFESSIONAL EXPERIENCE

Manufacturing Operations Analyst | Shreeji Plast | India

Jan 2023 - May 2024

- Reconciled inventory and material records across 2 source systems (Excel and ERP), traced mismatches to source data, and corrected issues before recurring reports were released.
- Prepared recurring inventory and production reports throughout a 17-month tenure, tracking volume changes, material constraints, schedule exceptions, and follow-up priorities.
- Reviewed inputs used by automated scheduling workflows, identifying missing or inconsistent values before system updates and downstream decisions.
- Compared material availability with production schedules, documented changes and open constraints, and shared data-backed risks with stakeholders.

EDUCATION

M.S., Business Analytics and Artificial Intelligence | The University of Texas at Dallas

May 2026

B.S., Data Science, GPA: 3.8/4.0 | Indus University

May 2024

Relevant Coursework: Database Foundations, Data Warehousing, Predictive Analytics, Advanced Statistics, Data Visualization, Cloud Computing

SELECTED RISK, ANALYTICS & AI PROJECTS

Credit Card Fraud Detection | Python, SQL, Pandas, scikit-learn

Academic Project

- Queried, cleaned, and validated imbalanced transaction data with SQL and Python, creating a reproducible dataset for fraud analysis.
- Built a classification workflow and evaluated it with 4 standard measures: precision, recall, F1, and ROC-AUC.
- Reviewed false-positive and false-negative patterns and translated model outputs into prioritized cases for investigation.

Hotel Cancellation Risk Modeling | Python, scikit-learn, Power BI

Apr 2026

- Prepared booking and customer-behavior features for repeatable training, validation, and risk-segment analysis.
- Trained and evaluated a Random Forest cancellation model that achieved 0.956 ROC-AUC and 0.843 F1.
- Analyzed feature importance and high-risk booking patterns, then translated model results into clear operational priorities.

Climate Risk Copilot | Python, Random Forest, Power BI

Apr 2026

- Cleaned and validated 1,080 operational and environmental records and trained a Random Forest model that achieved R2 of 0.919 (MAE 4.81; RMSE 7.26).
- Converted model scores into 630 Low, 234 Emerging, 90 High, and 126 Critical cases for consistent risk prioritization.
- Built Power BI views for KPI monitoring, anomaly review, segment distribution, and management reporting.

ParkSafe AI - Real-Time Decision Agent | Python, REST APIs, Elasticsearch, GCP

May - Jun 2026

- Integrated 3 external data sources (LADOT, Google Places, and Google Routes), standardized responses, and indexed validated records in Elasticsearch.
- Designed a transparent ranking model using 5 factors: availability, walking time, price, risk, and rating.
- Returned the top 5 parking recommendations and logged missing data, API timeouts, and fallback handling for reliable refreshes.
